7. ☐ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other ____.

1. The following is an examiner's statement of reasons for allowance: Regarding Claims 1, 9, and 14, Hollenbeck discloses all elements except that the control unit/drive IC does not stop driving the motor in response to an over voltage signal as the over voltage is detected during the slowing of the motor (Hollenbeck's control unit directly outputs an over voltage signal to shunt current in DC link).

Krohn reference teaches a DC motor drive system with safety features incorporated to monitor overvoltage, overcurrent, overpressure, and similar fault conditions and for disconnecting power from the system when fault occurs. Krohn also teaches locked rotor circuit 150 generating a signal to circuit breaker to disconnect line voltage, and a signal to motor control circuit 90 to stop driving the motor. Krohn differs as upon detection of an overvoltage condition, over voltage monitoring circuit 130 generate a signal to the circuit breaker to disconnect the input line voltage. Krohn does not teach the control circuit 90 stop driving the motor 50, when overvoltage is detected.

This limitation, the control unit stop driving the DC motor to cease operation of the DC motor upon detection of an overvoltage, in combination with the other recited elements of the claims, is not disclosed by prior art of record, and therefor allowable.

Claim 7 recites the allowable feature of Claims 1, 9, and 14, and further limiting the control unit as micro control unit, and the stop driving DC motor using programs, and therefore, allowable for the reasons as for Claims 1, 9, and 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
